FPSO Introductory Online Course

Developing a strategy for the life of your FPSO project

Crandall training presents a unique opportunity for you to clearly understand the complexities of today's FPSO projects.

Addressing the challenge of COVID-19, and to ensure we continue to meet our clients training requirements, we are delighted to announce our FPSO Introductory Course has been refreshed in a format which will be delivered live online.

The new online programme allows for flexibility – we can deliver the course direct to your desk over a timeframe which fits with your day-to-day business commitments. The programme, delivered over 8 modules, gives attendees a comprehensive overview of today's FPSO market and provides the tools to help build a robust strategy for delivery of a successful FPSO project.

The training programme offers oil companies, owner/operators, contractors, and service providers a practical means of managing risk, reducing cost and optimising efficiencies on their FPSO projects. Participation in the online course, whether for commercial interest or professional development, will give you insight into all the interfaces crucial in the execution of an FPSO project from conception to first oil.

Our aim is to equip you with the information necessary to ask the right questions and succeed in this dynamic sector by discussing, debating, and defining approaches to the following:

- Procurement strategy and evaluation and management of technical and commercial risk
- Global FPSO design and layout
- Fuel, heat, and power strategies
- Managing conversions
- Maritime and offshore regulatory regimes
- Opportunities and challenges of FPSO redeployment
- Sustainable finance trends and the green recovery

Benefit from the interactive aspects of our online training programme

Interactive workshop sessions will provide participants with the opportunity to work in 'project teams' to develop a complete FPSO strategy. Case studies will be allocated to each team where you will define the hull, moorings and topside layout and identify, manage, and mitigate risk. Teams will present their findings at the end of the module.

Crandall training provides only the most professional individuals to walk you through the FPSO minefield, sharing their knowledge and lessons learned from decades of hands on experience.
