

About Us

Crondall Energy provides, through its subsidiary Crondall Training Ltd, a range of training and coaching programmes for stakeholders within the floating production and subsea sectors.

Crondall Energy has been delivering open training sessions on FPSO developments and technology for over 14 years and has trained over 2,000 industry professionals around the world in that time. These courses are managed and marketed by Crondall Training (www.cron-dall-energy.com/training-courses).

If you require a more focussed training or coaching process, then Crondall Training can provide a programme customised to client or project specific needs.

The Crondall Energy FPSO design process is illustrated by the Design Spiral above.

Case Study

Crondall Energy delivered a training programme for a large European independent operator in relation to a West African FPSO project. The training material was used in support of a series of workshop sessions designed to identify and resolve decisions on key FPSO configuration issues. The training material was designed to help the project team better understand what the supply chain could offer, develop a more robust field development strategy and provide the project team with objective and impartial advice with which to inform their decision making.

Recent feedback on FPSO training products

"An excellent introduction to FPSO projects & operations"
Shell

"Very informative about the overall FPSO project from planning to completion"
BP

"Great overview of the technical and commercial aspects of FPSO projects"
Chevron

Training and knowledge transfer to build your team's FPSO understanding & competence.
